

IN THE CLAIMS:

Please amend Claims 19, 26, 28 and 31 as shown below. The claims, as pending in the subject application, now read as follows:

1. to 18. (Canceled)

19. (Currently amended) A data processing apparatus, which communicates with an image processing apparatus that processes image data by using resources retained in memory, comprising:

retention means for retaining a resource containing display names, name-use information indicative of correspondence between each display name and each printer language which can use the resource, and data of the resource, which is utilized in image processing;

input means for inputting, via a graphical user interface, multiple display names of ~~for~~ the resource retained by said retaining means;

first selecting means for selecting, via the graphical user interface, a display name corresponding to a ~~first~~ printing language which can use ~~for~~ the resource from among the multiple display names input by said input means, ~~or information indicating that a display name is not displayed corresponding to the first printing language;~~ and

~~second selecting means for selecting a display name corresponding to a second printing language which is different from the first printing language for the resource from among the multiple display names input by said input means, or information indicating that a display name is not displayed corresponding to the second printing language.~~

setting means for setting the display names inputted by said input means and the name-use information indicative of correspondence between the display name and the printing language selected by said selecting means to the resource retained by said retention means; and transmitting means for transmitting the resource to the image processing apparatus in response to a transmission instruction input via the graphical user interface, wherein the resource is retained by said retention means and contains the display names and the name-use information.

20. to 22. (Canceled)

23. (Previously presented) The apparatus according to claim 19, wherein the resource is a font resource used in printing, a form resource for forming an image by being superimposed on print data at the time of printing, a color-profile resource that expresses color space of an input/output device, a look-up-table resource, which is a conversion table for color correction in color processing, or a dither-pattern resource, which is pattern data for deciding expression of color in color processing.

24. and 25. (Canceled)

26. (Currently amended) A data processing apparatus, which communicates with an image processing apparatus that processes image data by using resources retained in memory, comprising:

a retention unit adapted to retain a resource containing display names, name-use information indicative of correspondence between each display name and each printer language which can use the resource, and data of the resource, which is utilized in image processing;

an input unit adapted to input, via a graphical user interface, multiple display names of for the resource retained by said retention unit;

~~a first selecting unit adapted to select, via the graphical user interface, a display name corresponding to a first printing language which can use for the resource from among the multiple display names input by said input unit, or information indicating that no display name is displayed corresponding to the first printing language;~~

~~a second selecting unit adapted to select a display name corresponding to a second printing language which is different from the first printing language for the resource from among the multiple display names input by said input unit, or information indicating that a display name is not displayed corresponding to the second printing language;~~

a setting unit adapted to set the display names inputted by said input unit and the name-use information indicative of correspondence between the display name and the printing language selected by said selecting unit to the resource retained by said retention unit; and

a transmitting unit adapted to transmit the resource to the image processing apparatus in response to a transmission instruction input via the graphical user interface, wherein the resource is retained by said retention unit and contains the display names and the name-use information.

27. (Canceled)

28. (Currently amended) A data processing method for communication ~~implemented~~ that is performed by a data processing apparatus communicating with an image processing apparatus that processes image data by using resources retained in memory, said method comprising:

retaining by the data processing apparatus a resource containing display names, name-use information indicative of correspondence between each display name and each printer language which can use the resource, and data of the resource, which is utilized in image processing;

inputting, via a graphical user interface of the data processing apparatus, multiple display names of ~~for~~ the resource retained in the retaining step;

selecting, via the graphical user interface of the data processing apparatus, a display name corresponding to a first printing language which can use ~~for~~ the resource from among the multiple display names input in the inputting step, ~~or information indicating that a display name is not displayed corresponding to the first printing language;~~

~~selecting a display name corresponding to a second printing language which is different from the first printing language for the resource from among the multiple display names input in the inputting step, or information indicating that a display name is not displayed corresponding to the second printing language.~~

setting by the data processing apparatus the display names inputted in the inputting step and the name-use information indicative of correspondence between the display name and the printing language selected in the selecting step to the resource retained in the retaining step; and

transmitting by the data processing apparatus the resource to the image processing apparatus in response to a transmission instruction input via the graphical user interface, wherein the resource is retained in the retaining step and contains the display names and the name-use information.

29. (Canceled)

30. (Previously presented) The method according to Claim 28, wherein the resource is selected from the group including a font resource used in printing, a form resource for forming an image by being superimposed on print data at the time of printing, a color-profile resource that expresses color space of an input/output device, a look-up-table resource, which is a conversion table for color correction in color processing, and/or a dither-pattern resource, which is pattern data for deciding expression of color in color processing.

31. (Currently amended) A computer-readable storage medium storing a computer program for communication of a data processing apparatus with an image processing apparatus that processes image data by using resources retained in memory, said computer program comprising:

code for retaining a resource containing display names, name-use information indicative of correspondence between each display name and each printer language which can use the resource, and data of the resource, which is utilized in image processing;

code for inputting, via a graphical user interface, multiple display names for the resource retained in the retaining step;

~~code for selecting, via the graphical user interface, display names corresponding to a first printing language which can use for the resource from among the multiple display names input in the inputting step, or information indicating that a display name is not displayed corresponding to the first printing language;~~

~~selecting a display name corresponding to a second printing language which is different from the first printing language for the resource from among the multiple display names input in the step of inputting, or information indicating that a display name is not displayed corresponding to the second printing language.~~

~~code for setting the display names inputted by said input code and the name-use information indicative of correspondence between the display name and the printing language selected by said selecting code to the resource retained by said retention code; and~~

~~code for transmitting the resource to the image processing apparatus in response to a transmission instruction input via the graphical user interface, wherein the resource is retained by said retaining code and contains the display names and the name-use information.~~

32. (Canceled)

33. (Previously presented) The computer-readable medium storing a computer program according to Claim 31, wherein the resource is selected from the group including a font resource used in printing, a form resource for forming an image by being superimposed on print data at the time of printing, a color-profile resource that expresses color space of an input/output device, a look-up-table resource, which is a conversion table for color correction in color

processing, and/or a dither-pattern resource, which is pattern data for deciding expression of color in color processing.
